

Mac Leopard 10.5.6 and upwards VPN (Campus Anywhere) setup instructions. Please make sure you are already connected to the Internet before starting this procedure.

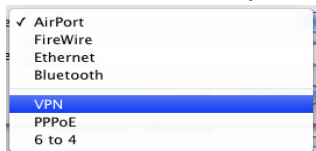

1. Select "System Preferences" 

2. Click  Network from the new window

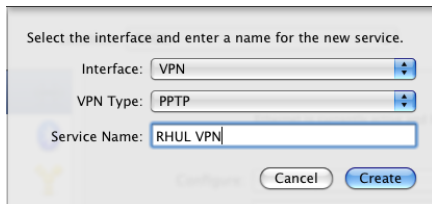

3. Click the [+] button on the bottom left corner from the pop up window.

4. Need to select how you want to connect, click interface and choose VPN

5. Then from the "VPN Type" select PPTP. Service name can be set to anything, however we suggest the name of RHUL VPN. Click Create.

6. Select "Configuration" and click "Add a Configuration" Call this RHUL then click create. The server address is **vpn.rhul.ac.uk** and account name is your RHUL User name so replace ABCD123 with your supplied username. Encryption should be as below and ensure "Show VPN status in menu bar" is ticked.

7. Select “Authentication Settings...” and from the menu select password and use your RHUL password. Click “ok”

8. Then select the “Advanced” tab and ensure the “Send all traffic over VPN connection” is ticked. Click “ok”

9. Apply the changes, then when you need to use the connection select it from the list of connections and select “Connect”
