

802.1x Windows Mobile Configuration Guide

(note: this document was written based on Windows Mobile version 5.0, other versions may vary slightly)

1. Firstly ensure that wireless is enabled on your device, click the wireless icon from the top of the screen (see below: the red circle indicates the wireless icon).

2. If this icon has a small 'x' next to it, you must enable it by clicking the icon and selecting the relevant option from the pop-up menu.
3. Once the wireless is enabled and the PDA has had a chance to scan for networks click the wireless icon once more. Now a pop-up should appear on the bottom of the screen (this may depend on the specific version of the operating system).

4. From the pop-up select "eduroam". Click OK
5. A new pop-up will appear, prompting you to choose between a work network or "the internet"... Choose the option for "the internet" (see below). Then click on connect.

6. You should now be presented with a screen asking for your username and password. Your username should be your fully qualified username (i.e. xpaa019@rhul.ac.uk not just xpaa019). Your password will be the same as you

use to log into your computer or email. Leave the domain field blank. Then press OK.

7. You should now be connected to eduroam.
