#### Aims:
- to provide an introduction to the theory of algorithms;
- to develop the skill of designing algorithms.

Basic algorithmic principles: Greedy algorithms, divide-and-conquer, dynamic programming, randomized algorithms.
Analysis of algorithms: Recurrences, O-notation, worst-case analysis, amortized analysis, probabilistic analysis; lower bounds for comparison-based sorting and finding the median.
Basic data structures: arrays, stacks, balanced search trees, hashing.

#### Learning Outcomes:
1. understand and apply the fundamental principles of algorithm design;
2. analyse basic algorithms; know amortized, average-case and worst-case analysis;
3. know basic data-structures
4. know efficient algorithms for sorting numbers; know lower bounds on comparison based algorithms for sorting numbers;
5. know asymptotic notation.
6. Demonstrate independent learning skills

#### Course Content:
The development of efficient algorithms is essential when considering problems with large inputs. Usually an algorithm has certain specifications, for example that it should solve a problem and take at most f(n) steps on any input of size n. This course is about the design of efficient algorithms and proving that they meet the desired specification. The course introduces basic principles and methods of algorithm design and analysis and considers fundamental problems like sorting numbers and multiplying matrices.

#### Teaching & Learning Methods:
The total number of notional learning hours associated with this course are 200. 3 hours of lectures over 11 weeks. Total 33 hours.
167 hours of private study, including work on the mini-project, problem sheets and examination preparation. This may include discussions with the course leader if the student wishes.

#### Key Bibliography:
Introduction to Algorithms by Cormen, Leiserson, Rivest, and Stein

#### Formative Assessment & Feedback:
Formative assessment in form of 8 problem sheets. The student will receive feedback as written comments on their attempts.

#### Summative Assessment:
**Exam:** 90% Written exam.
**Coursework:** 10% Individual unsupervised mini-project.

*Updated Sep 16*
