

Royal Holloway, University of London

Course specification for an undergraduate award

BSc Physics with Music (F3W3)

Section 1 – Introduction to your course

This course specification is a formal document, which provides a summary of the main features of your course and the learning outcomes that you might reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities that are provided. Further information is contained in the College prospectus, and in various handbooks, all of which you will be able to access online. Alternatively, further information on the College's academic regulations and policies can be found [here](#). Further information on the College's Admissions Policy can be found [here](#).

Your degree course in BSc Physics with Music is delivered in three stages, each of which comprises one year of full-time study during which you must follow modules to the value of 120 credits. The curriculum is characterised by strong progression and opportunities for specialisation throughout the course. Stages one and two provide a foundation for the later stages through a compulsory spine of modules that complete a core, discipline-specific, knowledge base. Stage three offers a wide range of optional modules for Single Honours students; for those taking Joint or Combined Honours, the compulsory spine extends into this stage.

Specifically, stage one gives a balanced foundation for progression, offers opportunities for students to select and move between degree courses according to their interests and provides a foundation which serves students from a wide variety of educational backgrounds. The stage one curriculum aims:

1. to extend and develop classical physics covered at A-level, to bring you to a common level and to set your knowledge into an appropriate context;
2. to develop modern physics and establish it on a firm foundation, enabling you to experience the flavour of modern physics, without excessive technical detail;
3. to extend and develop the mathematics covered at A-level;
4. to start the course of discipline-specific and transferable skills.

Stage two builds on this and applies the skills and knowledge acquired to specific subjects. The available modules complete the essential physics core consisting of classical and modern physics, emphasising Electromagnetism, Quantum Mechanics, and Classical and Statistical Thermodynamics. Skills are further developed and Physics specialists take modules in Mathematical Methods, Solid State Physics, and Optics. Other modules are available for the other courses.

In stage three, you take a number of advanced modules including options depending on your degree course and personal interests. An important component of the final year is a project, PH3110, which may be of an experimental, theoretical, or computational nature. Some third year modules closely reflect the research interests of members of staff, who are active specialists in their fields.

For joint and combined honours courses, please refer to the course specification for your secondary department's corresponding single honours course for further information on educational aims, and learning outcomes.

While Royal Holloway keeps all the information made available under review, courses and the availability of individual modules, especially optional modules are necessarily subject to change at any time, and you are therefore advised to seek confirmation of any factors which might affect your decision to follow a specific course. In turn, Royal Holloway will inform you as soon as is practicable of any significant changes which might affect your studies.

The following is brief description for some of the most important terminology for understanding the content of this document:

Degree course – May also be referred to as 'degree programme' or simply 'programme'; these terms refer to the qualification you will be awarded upon successful completion of your studies.

Module– May also be referred to as 'course', this refers to the individual units you will study each year to complete your degree course. Undergraduate degrees at Royal Holloway comprise modules to the value of 120 credits per year. On some degree courses a certain number of optional modules must be passed for a particular degree title.

Section 2 – Course details			
Date of specification update	March 2020	Location of study	Egham Campus
Course award and title	BSc Physics with Music	Level of study	Undergraduate
Course code	1350	UCAS code	F3W3
Year of entry	2020/21		
Awarding body	Royal Holloway, University of London		
Department	Physics	Other departments involved in teaching the course	Music
Mode(s) of attendance	Full-time	Duration of the course	Three years
Accrediting Professional, Statutory or Regulatory Body requirement(s)	Institute of Physics (IOP) – successful completion of this course partially meets the educational requirement for becoming a Chartered Physicist.		
Link to Coursefinder for further information:	https://www.royalholloway.ac.uk/studying-here/	For queries on admissions:	study@royalholloway.ac.uk .

Section 3 – Degree course structure										
3.1 Mandatory module information										
The following table summarises the mandatory modules which students must take in each year of study										
Year	Module code	Module title	Contact hours*	Self-study hours	Written exams**	Practical assessment**	Coursework**	Credits	FHEQ level	Module status (see below)
1	PH1110	Mathematics for Scientists 1	68	82	80%	0	20%	15	4	MNC
1	PH1120	Mathematics for Scientists 2	68	82	80%	0	20%	15	4	MNC
1	PH1140	Scientific Skills 1	71	79	0	6%	96%	15	4	MC
1	PH1320	Classical Mechanics	40	110	80%	0	20%	15	4	MC
1	PH1620	Classical Matter	40	110	80%	0	20%	15	4	MC
1	PH1920	Physics of the Universe	40	110	80%	0	20%	15	4	MC
1	MU1110	Theory and Analysis	20	130	100%	0	0	15	4	MC
2	PH1420	Physics: Fields and Waves	40	110	80%	0	20%	15	4	MC
2	PH2130	Mathematical Methods	61	89	80%	0	20%	15	5	MC
2	PH2710	The Solid State	38	112	90%	0	10%	15	5	MC
2	PH2150	Scientific Computing Skills	82	68	0	0	100%	15	5	MC
2	PH2210	Quantum Mechanics	38	112	90%	0	10%	15	5	MC
2	PH2610	Classical and Statistical Thermodynamics	38	112	70%	0	30%	15	5	MC
3	PH3010	Advanced Skills	56	94	0	15%	85%	15	6	MC
3	PH3110	Experimental/Theoretical Project	94	56	0	20%	80%	15	6	MC

3	PH2310	Optics	38	112	90%	0	10%	15	5	MC
3	PH2420	Electromagnetism	38	112	90%	0	10%	15	5	MC

This table sets out the most important information for the mandatory modules on your degree course. These modules are central to achieving your learning outcomes, so they are compulsory, and all students on your degree course will be required to take them. You will be automatically registered for these modules each year. Mandatory modules fall into two categories; 'condonable' or 'non-condonable'.

In the case of mandatory 'non-condonable' (MNC) modules, you must pass the module before you can proceed to the next year of your course, or to successfully graduate with a particular degree title. In the case of mandatory 'condonable' (MC) modules, these must be taken but you can still progress or graduate even if you do not pass them. Please note that although Royal Holloway will keep changes to a minimum, changes to your degree course may be made where reasonable and necessary due to unexpected events. For example; where requirements of relevant Professional, Statutory or Regulatory Bodies have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of external advisors, to enhance academic provision.

*Contact hours come in various different forms, and may take the form of time spent with a member of staff in a lecture or seminar with other students. Contact hours may also be laboratory or, studio-based sessions, project supervision with a member of staff, or discussion through a virtual learning environment (VLE). These contact hours may be with a lecturer or teaching assistant, but they may also be with a technician, or specialist support staff.

**The way in which each module on your degree course is assessed will also vary, however, the assessments listed above are all 'summative', which means you will receive a mark for it which will count towards your overall mark for the module, and potentially your degree classification, depending on your year of study. On successful completion of the module you will gain the credits listed. 'Coursework' might typically include a written assignment, like an essay. Coursework might also include a report, dissertation or portfolio. 'Practical assessments' might include an oral assessment or presentation, or a demonstration of practical skills required for the particular module.

3.2 Optional modules

In addition to mandatory modules, there will be a number of optional modules available during the course of your degree. The following table lists a selection of optional modules that are likely to be available. However, not all may be available every year. Although Royal Holloway will keep changes to a minimum, new options may be offered or existing ones may be withdrawn. For example; where reasonable and necessary due to unexpected events, where requirements of relevant Professional, Statutory or Regulatory Bodies (PSRBs) have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of External Advisors, to enhance academic provision. There may be additional requirements around option selection, so it is important that this specification is read alongside your department's Student Handbook, which you can access via their [webpage](#).

Year 1	Year 2	Year 3
Physics: none	Physics: none	Physics: PH3910 General Relativity and Cosmology
Music: MU1112 Creative Composition Techniques	Music: MU2002 Studies in Music History	Physics: PH3930 Particle Astrophysics
Music: MU1113 Practical Composition Skills	Music: MU2003 Studies in Ethnomusicology	Physics: PH3040 Energy and Climate Science

Music: MU1114 Very Short History of Music	Music: MU2213 Composition Portfolio	Physics: PH3150 Further Mathematical Methods
Music: MU1115 Introduction to Historical Musicology	Music: MU2253 Mozart's Operas	Physics: PH3170 C++ and Object Oriented Programming
Music: MU1116 Intro to World Music		Physics: PH3130 Advanced Classical Physics
Music: MU1117 Contemporary Debates in Music		Physics: PH3160 Nonlinear Systems and Chaos
Music: MU1111 Fundamentals of Music Theory		Physics: PH3210 Quantum Theory
		Physics: PH3510 Atomic Physics
		Physics: PH3520 Particle Physics
		Physics: PH3710 Metals and Semiconductors
		Physics: PH3730 Superconductivity and Magnetism
		Music: MU2322 Music in the City
		Music: MU2339 Popular Music and Musicians

3.3 Optional module requirements

In Stage 1, Music students on Required Intensive Theory entry must take:
 MU1110 Theory and Analysis (15 credits) (mandatory condonable)
 MU1111 Fundamentals of Music Theory (15 credits) (mandatory condonable)

All other student must take:
 MU1110 Theory and Analysis (15 credits) (mandatory condonable)
 And choose one further 15 credit module from:

List A
 MU1112 Creative Composition Techniques (15 credits)
 MU1113 Practical Composition Skills (15 credits)

List B
 MU1114 A Very Short History of Music (15 credits)
 MU1115 Introduction to Historical Musicology (15 credits)

List C
 MU1116 Introduction to World Music (15 credits)
 MU1117 Contemporary Debates in Music (15 credits)

In Stage 2, students must choose options to the value of 30 credits offered by the Department of Music. In Stage 3, students must choose options to the value of 30 credits offered by Physics and 30 credits offered by the Department of Music. You may not take more than 30 credits of Stage 2 (FHEQ Level 5) modules across Stage 3. This means that all optional modules must be at FHEQ Level 6.

Note: Modules in performance with attached instrumental/vocal lessons are not available in Combined Honours courses with Music as the minor component, such as Physics with Music. When choosing optional modules you must be sure to satisfy any prerequisites.

Section 4 - Progressing through each year of your degree course

For further information on the progression and award requirements for your degree, please refer to Royal Holloway's [Academic Regulations](#).

All first year students on single joint or combined honours courses offered all or in part by the School of Humanities, School of Performing and Digital Arts or department of Politics, International Relations and Philosophy are required to pass a Moodle-based writing skills quiz in order to progress into the second year of study. The pass mark for the test is 60%. Certificates of Distinction are awarded to students who achieve at least 80% in the quiz. Students may attempt the quiz as often as they wish with no penalties or capping. Students who meet the requirements for progression as stipulated in the [College's Undergraduate Regulations](#) (Section: Conditions for progression to the next stage) but fail to pass the Moodle-based quiz will not be permitted to progress into their second year of academic study at the College.

Section 5 – Educational aims of the course

The aims of this course are:

- to impart a secure knowledge of the fundamental elements of Physics;
- to nurture confidence in the use of appropriate mathematical techniques;
- to develop the skills and knowledge required for experimentation and/or theoretical modelling;
- to promote oral and written communication skills;
- to teach the effective use of information technology and computing facilities for the treatment and presentation of experimental data;
- to provide a sound awareness of safety procedures and environmental issues;
- to develop and strengthen problem solving abilities;
- to provide a firm foundation for postgraduate research and further study in the physical sciences or for entry into a wide range of both scientific and non-vocational careers.

Section 6 - Course learning outcomes

In general terms, the course provides opportunities for students to develop and demonstrate the following learning outcomes. (*Categories – Knowledge and understanding (K), Skills and other attributes (S), and Transferable skills (*)*)

<ol style="list-style-type: none"> 1. A broad knowledge of the inanimate physical universe to a level appropriate for a Bachelor's degree (K); 2. A sound knowledge of the fundamental concepts of Physics and how these may be applied to understand complex physical systems and address associated problems (K); 3. An understanding of the quantum and continuum descriptions of natural phenomena (K); 4. An appreciation of the microscopic and macroscopic structure of all the states (phases) of matter and their interactions with different forms of energy (K); 5. A knowledge and understanding of important physical laws and principles, and competence in the application of these principles to more diverse areas of physics and, where appropriate, to other disciplines (K); 6. A secure understanding of the experimental and/or theoretical techniques and diagnostic tools appropriate to the particular field of endeavour and an awareness of such techniques in other fields (K); 7. A critical approach to the gathering, collating, analysis and reporting of experimental data based on an understanding of errors and the limits of measurement (K); 8. An understanding of mathematical modelling and of the role of approximation (K); 	<ol style="list-style-type: none"> 9. Use appropriate mathematical and/or computational tools to formulate and tackle problems in physics and to model physical behaviour, making necessary approximations, thus comparing critically the results of calculations with those from experimental observation (S); 10. Use appropriate methods to analyse data and to evaluate the level of its uncertainty and to relate any conclusions to current theories of the physics involved (S); 11. Execute an experiment or investigation, analyse critically the results of it and draw valid conclusions including evaluation of the level of uncertainty in the results and comparison with expected outcomes, published results or theoretical predictions (S); 12. Plan, execute and report the results of an experiment or investigation in physics (S); 13. Communicate scientific information clearly and accurately with correct use of technical language (S*); 14. Use a range of laboratory apparatus competently and safely (S); 15. Read demanding textbooks, and other available literature, search databases and listen carefully and interact with colleagues to extract important information. Make use of appropriate IT packages/systems for the retrieval and analysis of this data (S*); 16. Manipulate numerical data, and present and interpret information graphically (S*); 17. Analyse complex information, manipulating precise and intricate ideas to construct logical arguments and then presenting them in a clear and concise manner (S*).
--	--

Section 7 - Teaching, learning and assessment

Teaching is mostly by means of lectures, seminars, laboratory practical classes and problem-solving sessions; the latter generally providing a forum for you, with the support of your instructors, to work through problem sets and applications in a smaller and more interactive setting. Learning is through participation in lectures and seminars, designated reading, completion of problem sets and guided independent study and research. You are expected to meet basic standards in information technology, for which training is provided by the College Computer Centre. Assessment of knowledge and understanding is mainly by formal, unseen written examination; coursework exercises, laboratory reports, oral and poster presentations and a Project dissertation are also assessed. A detailed mapping of the ways in which particular modules achieve the course learning outcomes may be found in the Department of Physics Student Handbook. Full details of the assessments for individual modules can be obtained from each department.

Section 8 – Additional costs	
Physics - £55; Music - £50	
These estimated costs relate to studying this particular degree course at Royal Holloway. General costs such as accommodation, food, books and other learning materials and printing etc., have not been included, but further information is available on our website.	
Section 9 – Indicators of quality and standards	
QAA Framework for Higher Education Qualifications (FHEQ) Level	4-6
Your course is designed in accordance with the FHEQ to ensure your qualification is awarded on the basis of nationally established standards of achievement, for both outcomes and attainment. The qualification descriptors within the FHEQ set out the generic outcomes and attributes expected for the award of individual qualifications. The qualification descriptors contained in the FHEQ exemplify the outcomes and attributes expected of learning that results in the award of higher education qualifications. These outcomes represent the integration of various learning experiences resulting from designated and coherent courses of study.	
QAA Subject benchmark statement(s)	http://www.qaa.ac.uk/quality-code/subject-benchmark-statements
Subject benchmark statements provide a means for the academic community to describe the nature and characteristics of courses in a specific subject or subject area. They also represent general expectations about standards for the award of qualifications at a given level in terms of the attributes and capabilities that those possessing qualifications should have demonstrated.	

Section 10 – Further information

This specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate when taking full advantage of the learning opportunities that are available. More detailed information on modules, including teaching and learning methods, and methods of assessment, can be found via the online [Module Catalogue](#). The accuracy of the information contained in this document is reviewed regularly by the university, and may also be checked routinely by external agencies, such as the Quality Assurance Agency (QAA).

Your course will be reviewed regularly, both by the university as part of its cyclical quality enhancement processes, and/or by your department or school, who may wish to make improvements to the curriculum, or in response to resource planning. As such, your course may be revised during the module of your study at Royal Holloway. However, your department or school will take reasonable steps to consult with students via appropriate channels when considering changes. All continuing students will be routinely informed of any significant changes.

Section 11 – Intermediate exit awards (where available)

You may be eligible for an intermediate exit award if you complete part of the course as detailed in this document. Any additional criteria (e.g. mandatory modules, credit requirements) for intermediate awards is outlined in the sections below.

Award	Criteria	Awarding body
Diploma in Higher Education (DipHE)	Pass in 210 credits of which at least 90 must be at or above FHEQ Level 4 and at least 120 of which must be at or above FHEQ Level 5	Royal Holloway and Bedford New College
Certificate in Higher Education (CertHE)	Pass in 120 credits of which at least 90 must be at or above FHEQ Level 4	Royal Holloway and Bedford New College

Section 12 - Associated award(s)

BSc Physics with Music (F3W3)
