

Royal Holloway, University of London

Course specification for an undergraduate award

BENG ELECTRONIC ENGINEERING WITH A YEAR IN INDUSTRY (HH61)

Section 1 – Introduction to your course

This course specification is a formal document, which provides a summary of the main features of your course and the learning outcomes that you might reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities that are provided. Further information is contained in the College prospectus, and in various handbooks, all of which you will be able to access online. Alternatively, further information on the College's academic regulations and policies can be found [here](#). Further information on the College's Admissions Policy can be found [here](#).

Your degree course in BEng Electronic Engineering with a Year in Industry provides progressive structures in which you are able to broaden your knowledge and understanding, and appropriate skills in Electronic Engineering enabling you to graduate ready for employment in industry. The course contains a combination of mandatory modules in Electronic Engineering introducing you to the theoretical knowledge and practical skills relevant to professional practice, with a range of specialist options in your final year such as renewable energy systems, smart transportation, voice and music technologies, human factors and healthcare engineering.

The structure in stage one and two encourages you to work in teams, in stage 3 to spend a year in industry and in stage four to develop your own interests through informed choice among specialist options. In stage four you will be required to produce an individual project from conception through to production.

While Royal Holloway keeps all the information made available under review, courses and the availability of individual modules, especially optional modules are necessarily subject to change at any time, and you are therefore advised to seek confirmation of any factors which might affect your decision to follow a specific module. In turn, Royal Holloway will inform you as soon as is practicable of any significant changes which might affect your studies.

The following is brief description for some of the most important terminology for understanding the content of this document:

Degree course – May also be referred to as 'degree programme' or simply 'programme', these terms refer to the qualification you will be awarded upon successful completion of your studies.

Module – May also be referred to as 'course', this refers to the individual units you will study each year to complete your degree course. Undergraduate degrees at Royal Holloway comprise a combination of modules in multiples of 15 credits to the value of 120 credits per year. On some degree courses a certain number of optional modules must be passed for a particular degree title.

Section 2 – Course details			
Date of specification update	April 2020	Location of study	Egham Campus
Course award and title	BEng Electronic Engineering with a Year in Industry	Level of study	Undergraduate
Course code	3035	UCAS code	H661
Year of entry	2020/21		
Awarding body	Royal Holloway, University of London		
Department or school	Electronic Engineering	Other departments or schools involved in teaching the course	N/A
Mode(s) of attendance	Full-time	Duration of the course	Four years
Accrediting Professional, Statutory or Regulatory Body requirement(s)	Applied for Institution of Engineering and Technology (IET) accreditation but the visit can only happen when the 2 nd year cohort is in place. If the application is successful, it is expected that the 2019 cohort will be given accredited status on completion of the course (accreditation application currently under review).		
Link to Coursefinder for further information:	https://www.royalholloway.ac.uk/studying-here/undergraduate/electronic-engineering/electronic-engineering-with-a-year-in-industry/	For queries on admissions:	study@royalholloway.ac.uk .

Section 3 – Degree course structure										
3.1 Mandatory module information										
The following table summarises the mandatory modules which students must take in each year of study										
Stage	Module code	Module title	Contact hours*	Self-study hours	Written exams**	Practical assessment**	Coursework**	Credits	FHEQ level	Module status (see below)
1	EE1000	Embedded Systems Creative Team Project 1	100	200	-	25%	75%	30	4	MC
1	EE1010	Programming in C++	50	100	-	-	100%	15	4	MC
1	EE1020	Electronic circuits and components	50	100	60%	-	40%	15	4	MC
1	EE1030	Communications engineering	50	100	60%	-	40%	15	4	MC
1	CS1840	Internet Services	31	119	90%	-	10%	15	4	MC
1	EE1110	Mathematics for Engineers 1	68	82	60%	-	40%	15	4	MC
1	EE1120	Mathematics for Engineers 2	68	82	60%	-	40%	15	4	MC
2	EE2000	Embedded Systems Creative Team Project 2	100	200	-	40%	60%	30	5	MC
2	EE2010	Software engineering	50	100	-	30%	70%	15	5	MC
2	EE2020	Signals, Systems and Communications	50	100	50%	30%	20%	15	5	MC
2	EE2040	Control engineering	50	100	50%	-	50%	15	5	MC
2	EE2060	Electronic materials and devices	50	100	50%	30%	20%	15	5	MC
2	EE2070	Analogue Electronic Systems	50	100	50%	-	50%	15	5	MC

2	EE2080	Professional and Sustainable Engineering	50	100	-	50%	50%	15	5	MC
3	EE3001	Year in Industry						30	6	MNC
4	EE3000	Individual project	110	340	-	20%	80%	45	6	MNC
4	EE3010	Digital Signal Processing Design	40	110	-	80%	20%	15	6	MC

This table sets out the most important information for the mandatory modules on your degree course. These modules are central to achieving your learning outcomes, so they are compulsory, and all students on your degree course will be required to take them. You will be automatically registered for these modules each year. Mandatory modules fall into two categories; 'condonable' or 'non-condonable'.

In the case of mandatory 'non-condonable' (MNC) modules, you must pass the module before you can proceed to the next year of your course, or to successfully graduate with a particular degree title. In the case of mandatory 'condonable' (MC) modules, these must be taken but you can still progress or graduate even if you do not pass them. Please note that although Royal Holloway will keep changes to a minimum, changes to your degree course may be made where reasonable and necessary due to unexpected events. For example; where requirements of relevant Professional, Statutory or Regulatory Bodies have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of external advisors, to enhance academic provision.

*Contact hours come in various different forms, and may take the form of time spent with a member of staff in a lecture or seminar with other students. Contact hours may also be laboratory or, studio-based sessions, project supervision with a member of staff, or discussion through a virtual learning environment (VLE). These contact hours may be with a lecturer or teaching assistant, but they may also be with a technician, or specialist support staff.

**The way in which each module on your degree course is assessed will also vary, however, the assessments listed above are all 'summative', which means you will receive a mark for it which will count towards your overall mark for the module, and potentially your degree classification, depending on your year of study. On successful completion of the module you will gain the credits listed. 'Coursework' might typically include a written assignment, like an essay. Coursework might also include a report, dissertation or portfolio. 'Practical assessments' might include an oral assessment or presentation, or a demonstration of practical skills required for the particular module.

3.2 Optional modules

In addition to mandatory modules, there will be a number of optional modules available during the course of your degree. The following table lists a selection of optional modules that are likely to be available. However, not all may be available every year. Although Royal Holloway will keep changes to a minimum, new options may be offered or existing ones may be withdrawn. For example; where reasonable and necessary due to unexpected events, where requirements of relevant Professional, Statutory or Regulatory Bodies (PSRBs) have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of External Advisors, to enhance academic provision. There may be additional requirements around option selection, so it is important that this specification is read alongside your department's Student Handbook, which you can access via their [webpage](#) or the [Course Catalogue](#).

Stage 1	Stage 2	Stage 3	Stage 4
None	None	None (year in industry, see section 4)	EE3020 Renewable energy systems
			EE3050 Voice technologies
			EE3060 Fundamentals of Biomedical Engineering
			EE3070 Digital Systems Design
			EE3080 Advanced Communications Systems
			CS3760 Information Security

3.3 Optional module requirements

In stage 4 you must choose 60 credits of optional modules at FHEQ level 6 (EE30XX, CS3XXX or IY3XXX)

Section 4 - Progressing through each year of your degree course

For further information on the progression and award requirements for your degree, please refer to Royal Holloway's [Academic Regulations](#).

The third year of this degree course will be spent on a work placement. You will be supported by your academic department and the Royal Holloway Careers Service to find a suitable placement. However, Royal Holloway cannot guarantee that all students who are accepted onto this degree course will secure a placement, and the ultimate responsibility lies with you. You will need to achieve an agreed level of academic performance to proceed onto, or remain on, a placement. For those of you on the Year in Industry course EE3001 is mandatory non-condonable and must be passed to qualify for the degree title Year in Industry. This year forms an integral part of the degree course and you will be asked to complete assessed work. The mark for this work will count towards the degree.

Section 5 – Educational aims of the course

The aims of this course are:

- to engage you imaginatively in the process of learning through creative hands-on group and individual project based activities, enabling you to develop independent critical thinking and judgement;
- to encourage you to appreciate how electronic engineering is the heart of many systems used on a daily basis, including mobile communications, computers, transport systems, energy systems, medical applications, domestic appliances, TV, radio, music studios and gaming devices;
- to equip students with the technical knowledge, practical skills and confident verbal and written communication abilities that are key to successful industrial team working in electronic engineering;
- to produce graduates that fully meet the demands required for employment in industry;
- to develop an understanding of working in groups ;
- to prepare you to present reasoned verbal and written arguments in a confident manner; gain experience in the application of creativity in solving engineering problems;
- to encourage an awareness of environmental and social issues, investigating new materials and using them in ways that have a beneficial effect on humanity;

Section 6 - Course learning outcomes

In general terms, the courses provide opportunities for students to develop and demonstrate the following learning outcomes. (Categories – Knowledge and understanding (K), Skills and other attributes (S), and Transferable skills (*))

<ol style="list-style-type: none"> 1. the fundamental principles of electronic engineering, software engineering, components and circuit design (K); 2. the modern computer systems engineering, digital systems design, coding measurements techniques for specific industry engineering applications (K); 3. the historical context and development of the technology used in everyday life (K); 4. an understanding of issues facing this and future generations such as green energy provision, communication systems and appliance control (K); 5. sustainability generation and environmental issues (K); 6. future development of electronic devices and circuits (K); 7. computer and network security techniques and applications (K); 8. algorithms and complexity, and Internet services (K); 9. the practical use of embedded systems (K); 10. the C++ programming language (K); 11. software engineering and optimisation techniques (K); 12. cyber security (K); 13. specialise in an area of personal interest in their individual project (K); 14. management techniques, which are used to achieve successful team project development from conception to production (K); 	<ol style="list-style-type: none"> 15. analysis and critical interpretation of text and data (S);* 16. ability to produce ingenious solutions that are prototyped and brought to product readiness for market (S); 17. take progressive responsibility for their own study through negotiating subject areas of specialism with each other in practical's and workshops, through the informed choice of options and an individual major project in the final year that leads to a final product (S)* 18. sensitivity to and responsiveness and an understanding of industrial conventions (S); 19. the ability to conduct literary research independently using traditional and electronic resources (S), * 20. command of a relevant wider vocabulary and appropriate critical and theoretical terminology (S); 21. planning and execution of formal reports and project-work, bibliographical skills, developing a reasoned argument (S);* 22. advanced written and oral presentation skills, including the ability to present logical and coherent written and oral arguments of varying lengths (S);* 23. the ability to organise and interpret complex information in a structured and systematic way, and to comprehend and develop sophisticated concepts (S);* 24. the capacity for independent thought and judgement, along with skills in critical reasoning (S);* 25. information technology skills (including word processing, email, WWW, information handling and retrieval), and the ability to engage with the textual use of new media, video, TV, DVD and electronic (S);* 26. interpersonal skills required for team working, involving non-judgmental communication whilst recognising and respecting the viewpoints of others (S);* 27. time management and organisational skills including working to deadlines, prioritising tasks, organising work/social time (S);* 28. lifelong learning and contributions to the wider community (these include personal motivation; the ability to work autonomously and with others; self-awareness and self-management; empathy and insight; intellectual integrity; awareness of responsibility as a local, national and international citizen; interest in lifelong learning; flexibility and adaptability)(S).
--	---

Section 7 - Teaching, learning and assessment

Teaching activities will include lectures, tutorials and seminars and practical project work will be carried out in groups and individually in purpose-built thinking, prototyping and fabrication laboratories. In particular, the underlying principles of the course are the exploitation and development of creative skills in the context of proposing ingenious solutions to tomorrow's problems prior to the prototype and product development stages.

Various assessment methods will be used including examinations for theoretical subjects, formal presentations, reports and practical demonstrations for project work with an additional viva voce examinations for final year individual projects. In addition, you will be involved in workshops and will produce various forms of creative work. You will contribute to group presentations and demonstrations for the assessment of group project work. Full details of the assessments for individual modules can be obtained from the [Department](#).

Section 8 – Additional costs

There are no single associated costs greater than £50 per item on this degree course.

These estimated costs relate to studying this particular degree course at Royal Holloway. General costs such as accommodation, food, books and other learning materials and printing etc., have not been included, but further information is available on our website.

Section 9 – Indicators of quality and standards	
QAA Framework for Higher Education Qualifications (FHEQ) Level	4-6
Your course is designed in accordance with the FHEQ to ensure your qualification is awarded on the basis of nationally established standards of achievement, for both outcomes and attainment. The qualification descriptors within the FHEQ set out the generic outcomes and attributes expected for the award of individual qualifications. The qualification descriptors contained in the FHEQ exemplify the outcomes and attributes expected of learning that results in the award of higher education qualifications. These outcomes represent the integration of various learning experiences resulting from designated and coherent courses of study.	
QAA Subject benchmark statement(s)	http://www.qaa.ac.uk/docs/qaa/subject-benchmark-statements/sbs-engineering-15.pdf?sfvrsn=f99df781_10
Subject benchmark statements provide a means for the academic community to describe the nature and characteristics of courses in a specific subject or subject area. They also represent general expectations about standards for the award of qualifications at a given level in terms of the attributes and capabilities that those possessing qualifications should have demonstrated.	

Section 10 – Further information

This specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate when taking full advantage of the learning opportunities that are available. More detailed information on modules, including teaching and learning methods, and methods of assessment, can be found via the online [Course Catalogue](#). The accuracy of the information contained in this document is reviewed regularly by the university, and may also be checked routinely by external agencies, such as the Quality Assurance Agency (QAA).

Your course will be reviewed regularly, both by the university as part of its cyclical quality enhancement processes, and/or by your department or school, who may wish to make improvements to the curriculum, or in response to resource planning. As such, your course may be revised during the course of your study at Royal Holloway. However, your department or school will take reasonable steps to consult with students via appropriate channels when considering changes. All continuing students will be routinely informed of any significant changes.

Section 11 – Intermediate exit awards (where available)

You may be eligible for an intermediate exit award if you complete part of the course as detailed in this document. Any additional criteria (e.g. mandatory modules, credit requirements) for intermediate awards is outlined in the sections below.

Award	Criteria	Awarding body
Diploma in Higher Education (DipHE)	Pass in 210 credits of which at least 90 must be at or above FHEQ Level 4 and at least 120 of which must be at or above FHEQ Level 5	Royal Holloway and Bedford New College
Certificate in Higher Education (CertHE)	Pass in 120 credits of which at least 90 must be at or above FHEQ Level 4	Royal Holloway and Bedford New College

Section 12 - Associated award(s)

- BEng Electronic Engineering
- BEng Electronic Engineering with a Year in Industry
