

Royal Holloway, University of London

Course specification for an undergraduate award

BSc Genetics (C400)

Section 1 – Introduction to your course

This course specification is a formal document, which provides a summary of the main features of your course and the learning outcomes that you might reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities that are provided. Further information is contained in the College prospectus, and in various handbooks, all of which you will be able to access online. Alternatively, further information on the College's academic regulations and policies can be found [here](#). Further information on the College's Admissions Policy can be found [here](#).

Your degree course in Genetics is delivered in three stages, each of which comprises one year of full-time study, or two years of part-time study, during which you must follow modules to the value of 120 national credits. The curriculum is based around a core set of mandatory modules and there is a strong foundation in Stages one and two, which covers the requirements of the benchmarking statements in molecular aspects of the biosciences.

Stage one comprises a fixed selection of mandatory modules (totalling 75 credits) and seeks to provide the necessary grounding for the study of the subject at degree level, with appropriate Chemistry and Biochemistry subjects in addition to an introduction to Genetics and Cell Biology. You also select from a set of optional modules which provide the option to include Physiology, Protein Biochemistry and Enzymology, Biology in a Changing World or a module on the Green Planet: Plants and Our Future, depending on individual interests. Stage one also includes a strong element of laboratory training, with practical work in all modules, as well as providing support with the skills necessary for the study of biological sciences. In **Stage two** you take 4 mandatory modules to the value of 60 credits and choose the remaining credits from a list of options. The mandatory modules build on the foundations laid in stage one and provide a basis for the study of the research led specialist modules in the stage three. Again the modules all include a substantial element of laboratory training that prepares you for the selection and implementation of the individual research project in stage three. The optional modules allow you to either concentrate on genetics or to diversify into other areas depending on your interests. In **Stage three** you take 2 mandatory modules to the value of 30 credits, and choose 4 other modules from a list of options. The mandatory and optional modules available all have a strong molecular basis, but include topics as diverse as the Applications of Genetic Engineering, Circadian Biology, Seed Biology and Molecular and Medical Microbiology. You also complete an individual research project, which provides training in a specialised research area and also in generic skills such as independent working, literature searching, report writing, use of word processing, graphics and statistics. The project is regarded as your graduate capstone experience, as it is the culmination of your training in experimental design, research techniques, data analysis and presentation.

The course emphasises the importance of genetics in the study of biology and biochemistry. It includes training in a range of practical techniques and skills relevant to research work in molecular bioscience. The system is also flexible and allows you to transfer to other degree streams within the Department up to the start of the second term, or indeed to other Molecular Bioscience degrees up to the start of stage two. You can also take up to 30 credits from outside the Department of Biological Sciences, but within other Science Departments during stage two/three. Options are selected in consultation with your Personal Tutor and the Director of Teaching/Department Lead in UG Education.

While Royal Holloway keeps all the information made available under review, courses and the availability of individual modules, especially optional modules are necessarily subject to change at any time, and you are therefore advised to seek confirmation of any factors which might affect your decision to follow a specific course. In turn, Royal Holloway will inform you as soon as is practicable of any significant changes which might affect your studies.

The following is a brief description for some of the most important terminology for understanding the content of this document:

Degree course – May also be referred to as ‘degree programme’ or simply ‘programme’, these terms refer to the qualification you will be awarded upon successful completion of your studies.

Module – May also be referred to as ‘course’, this refers to the individual units you will study each year to complete your degree course. Undergraduate degrees at Royal Holloway comprise a combination of modules in multiples of 15 credits to the value of 120 credits per year. On some degree courses a certain number of optional modules must be passed for a particular degree title.

Section 2 – Course details			
Date of specification update	August 2022	Location of study	Egham Campus
Course award and title	BSc Genetics	Level of study	Undergraduate
Course code	3543	UCAS code	C400
Year of entry	2023/24		
Awarding body	Royal Holloway, University of London		
Department or school	Department of Biological Sciences School of Life Sciences and the Environment	Other departments or schools involved in teaching the course	N/A
Mode(s) of attendance	Full-time or Part-time	Duration of the course	Three years or Six years
Accrediting Professional, Statutory or Regulatory Body requirement(s)	You must pass the BS3010 Individual Research Project in order to qualify for an Honours Degree in Genetics; this is a requirement of the Royal Society of Biology for an accredited degree.		
Link to Coursefinder for further information:	https://www.royalholloway.ac.uk/studying-here/	For queries on admissions:	https://royalholloway.ac.uk/applicationquery

Section 3 – Degree course structure

3.1 Mandatory module information

The following table summarises the mandatory modules which students must take in each year of study

Year	Module code	Module title	Credits	FHEQ level	Module status (Mandatory Condonable MC or Mandatory Non-Condonable MNC)
1	BS1021	Becoming a Bioscientist	15	4	MC
1	BS1031	Chemistry of Life	15	4	MC
1	BS1032	Fundamental Biochemistry	15	4	MC
1	BS1071	Cell Biology and the Origin of Life	15	4	MC
1	BS1072	Genetics	15	4	MC
2	BS2040	Cell Dynamics: Division and Movement	15	5	MC
2	BS2150	Applications of Molecular Genetics in Biology	15	5	MC
2	BS2520	Protein Structure and Function	15	5	MC
2	BS2530	Molecular Biology	15	5	MC
3	BS3010	Individual Research Project	30	6	MNC
3	BS3540	Cell and Molecular Biology of Cancer	15	6	MC
3	BS3560	Functional Genomics, Proteomics and Bioinformatics	15	6	MC

This table sets out the most important information for the mandatory modules on your degree course. These modules are central to achieving your learning outcomes, so they are compulsory, and all students on your degree course will be required to take them. You will be automatically registered for these modules each year. Mandatory modules fall into two categories: 'condonable' or 'non-condonable'.

In the case of mandatory 'non-condonable' (MNC) modules, you must pass the module before you can proceed to the next year of your course, or to successfully graduate with a particular degree title. In the case of mandatory 'condonable' (MC) modules, these must be taken but you can still progress or graduate even if you do not pass them. Please note that

although Royal Holloway will keep changes to a minimum, changes to your degree course may be made where reasonable and necessary due to unexpected events. For example: where requirements of relevant Professional, Statutory or Regulatory Bodies have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of external advisors, to enhance academic provision.

3.2 Optional modules

In addition to mandatory modules, there will be a number of optional modules available during the course of your degree. Although Royal Holloway will keep changes to a minimum, new options may be offered or existing ones may be withdrawn. For example where reasonable and necessary due to unexpected events, where requirements of relevant Professional, Statutory or Regulatory Bodies (PSRBs) have changed and course requirements must change accordingly, or where changes are deemed necessary on the basis of student feedback and/or the advice of External Advisors, to enhance academic provision. There may be additional requirements around option selection; please contact the Department for further information.

During stage 1 you must choose options to the value of 45 credits from the list of stage one modules offered by the Department.
During stage 2 you must choose options to the value of 60 credits from the list of stage two modules offered by the Department.
During stage 3 you must choose options to the value of 60 credits from the list of stage three modules offered by the Department.

Section 4 - Progressing through each year of your degree course

For further information on the progression and award requirements for your degree, please refer to Royal Holloway's [Academic Regulations](#).

Progression throughout the year/s is monitored through performance in summative or formative coursework assignments. Please note that if you hold a Student Visa and you choose to leave (or are required to leave because of non-progression) or complete early (before the course end date stated on your CAS), then this will be reported to UKVI.

All first year undergraduate students are required to take and pass the non-credit bearing Moodle-based Academic Integrity module SS1001 in order to progress into the second year of study (unless their course includes the alternative mandatory SS1000 module). The pass mark for the module assessment is stated in the on-line Academic Integrity Moodle module. Students may attempt the assessment as often as they wish with no penalties or capping. Students who meet the requirements for progression as stipulated in the College's Undergraduate Regulations (Section: Conditions for progression to the next stage) but fail to pass the Moodle-based Academic Integrity module will not be permitted to progress into their second year of academic study at the College

Note for part-time study you will take:

Stage one (a):

BS1021 Becoming a Bioscientist (15 credits; condonable)

BS1031 Chemistry of Life (15 credits; condonable)
BS1032 Fundamental Biochemistry (15 credits; condonable)
and choose a 15 credit option from the Stage one modules listed above.

Stage one (b):

BS1071 Cell Biology and the Origin of Life (15 credits; condonable)
BS1072 Genetics (15 credits; condonable)
and choose a 15 credit option from the Stage one modules listed above.

Stage two (a)

BS2150 Applications of Molecular Genetics in Biology (15 credits; condonable)
BS2520 Protein Structure and Function (15 credits; condonable)
and choose 30 credits of options from the stage two modules listed above

Stage two (b)

BS2040 Cell Dynamics: Division and Movement (15 credits; condonable)
BS2530 Molecular Biology (15 credits; condonable)
and choose 30 credits of options from the stage two modules listed above

Stage three (a)

BS3010 Individual Research Project (30 credits) [Non-condonable fail – must be passed to qualify for specific field of study].
BS3540 Cell and Molecular Biology of Cancer (15 credits; condonable)
BS3560 Functional Genomics, Proteomics, and Bioinformatics (15 credits; condonable)

Stage three (b)

Options to the value of 60 credits from the stage three modules listed above

Section 5 – Educational aims of the course

The aims of the Honours Degree course in Genetics are to:

- provide a sound knowledge and critical understanding of genetics through a core of modules, and develop an insight into the current frontiers of knowledge, primarily through a series of specialised Stage 3 modules;
- provide an understanding of how the principles of genetics underlie much of the basis of modern research and have informed our biological and cellular understanding;
- provide knowledge of the essential biochemical principles that underlie genetics;
- develop, through a flexible and progressive structure, a range of subject-specific and transferable skills, including practical laboratory skills, self-management, information retrieval, communication and presentation skills, working with others, decision making and meeting deadlines, that equip you for future employment.
- provide experience of independent research through a final year project;
- produce graduates who can work safely and responsibly with biological and chemical materials and laboratory equipment.

Section 6 - Course learning outcomes

In general terms, the courses provide opportunities for students to develop and demonstrate the following learning outcomes. (*Categories – Knowledge and understanding (K), Skills and other attributes (S), and Transferable skills (*)*)

- | | |
|--|---|
| <ol style="list-style-type: none"> 1. describe the essential molecular, cellular, and chemical principles that underlie genetics (K); 2. elaborate on the structure, arrangement, expression and regulation of genes, and the techniques used to investigate and manipulate gene function (K); 3. discuss the importance of genetics to the development and genetic manipulation of organisms, and to the understanding of disease (K); 4. explain what determines the three-dimensional structure of biological macromolecules and how this is related to their biological functions (K); 5. describe the structure and function of various cell types in unicellular and multicellular organisms, including cell differentiation, and how they are investigated experimentally (K); 6. demonstrate an understanding of the application of genetics in diverse areas of research, and how this has influenced our understanding of biological function or provided avenues to help ensure global sustainability (K); 7. engage with philosophical and ethical issues arising from some of the current developments in the biosciences and their impact on society, and explain how ethical issues underpin professional integrity and standards (K); 8. demonstrate competence in a range of practical techniques and skills in relevant areas of the biosciences, applying standard safety protocols and Good Laboratory Practice (S); 9. perform accurate data collection, analysis and interpretation including relevant numerical calculations, statistical analysis, testing of hypotheses, and show ability to place the work in context, analyse and solve problems, make decisions, and suggest lines of further study (S*) 10. apply well-developed strategies for accessing information from a wide range of sources to maintain, update, and enhance your knowledge of the Biosciences including the cutting edge developments in the field and cross-disciplinary awareness, and sort, filter, synthesise and abstract information to communicate the principles clearly in oral and written forms in a way that is organised, topical and recognises the limits of current hypotheses (K, S*); | <ol style="list-style-type: none"> 11. critically assess the merits of contrasting subject-specific theories, paradigms, concepts and principles and develop a reasoned argument to support your position (S); 12. plan, design, execute and present an independent piece of research through a theoretical or practical project relevant to genetics, demonstrating time management, initiative, problem solving and independence, and critically assess the quality of evidence (S*); 13. take personal responsibility for your own behaviour to benefit learning and wellbeing, and develop habits of reflection on that learning (S*); 14. creatively apply original ideas, using imaginative and/or innovative approaches to tackle problems (S*); 15. write and speak to effectively communicate science to peers and non-scientists (S*); 16. use information technology, including spreadsheets, databases and bioinformatics approaches in the analysis of large datasets (S*); 17. demonstrate interpersonal skills and social intelligence, including collaborating with others in groups, taking opportunities for leadership and recognising and respecting the views of others (S*); 18. prepare for your career and develop awareness of your graduate-level transferable skills (S*). . |
|--|---|

Section 7 - Teaching, learning and assessment

The overall strategy is to provide a progressive approach to genetics concepts and systems of increasing complexity through teaching methods that aid learning and stimulate interest. Teaching is mostly by means of lectures, laboratory classes, seminars, tutorials, study/revision sessions, with knowledge and understanding further developed by guided independent study. Learning and analytical ability are developed and reinforced through problem solving, essay writing, laboratory classes, critical evaluation and by giving you the opportunity to design, execute and evaluate your own experiments. You are encouraged to acquire further knowledge beyond taught material, e.g. by reading topical reviews, original research literature and attending research seminars, especially in the final year.

The practical assignments associated with first year and second year modules provide training in a range of subject specific laboratory techniques, including safety assessment. The culmination of these skills is demonstrated in the final year research project, and for literature skills the preparation of a literature report. You have to prepare your own risk assessment prior to commencing your final year project work.

Training in intellectual and key transferable skills is embodied throughout the course and forms a strong element of the tutorial and study session programmes. You are required to meet basic standards in information technology.

Assessment is typically by formal unseen written examinations, practical exams and a range of coursework assignments such as essays and laboratory reports, in addition to poster preparation, oral presentations and the individual research project. Full details of the assessments for individual modules can be obtained from the Department.

Contact hours come in various forms and may take the form of time spent with a member of staff in a lecture or seminar with other students. Contact hours may also be laboratory or studio-based sessions, project supervision with a member of staff, or discussion through a virtual learning environment (VLE). These contact hours may be with a lecturer or teaching assistant, but they may also be with a technician, or specialist support staff.

The way in which each module on your degree course is assessed will also vary, however, the assessments listed above are all 'summative', which means you will receive a mark for it which will count towards your overall mark for the module, and potentially your degree classification, depending on your year of study. On successful completion of the module you will gain the credits listed. 'Coursework' might typically include a written assignment, like an essay. Coursework might also include a report, dissertation or portfolio. 'Practical assessments' might include an oral assessment or presentation, or a demonstration of practical skills required for the particular module

More detailed information on modules, including teaching and learning methods, and methods of assessment, can be found via the online [Module Catalogue](#). The accuracy of the information contained in this document is reviewed regularly by the university, and may also be checked routinely by external agencies, such as the Quality Assurance Agency (QAA).

Section 8 – Additional costs
There are no single associated costs greater than £50 per item on this degree course.
These estimated costs relate to studying this particular degree course at Royal Holloway. General costs such as accommodation, food, books and other learning materials and printing etc., have not been included, but further information is available on our website.

Section 9 – Indicators of quality and standards	
QAA Framework for Higher Education Qualifications (FHEQ) Level	4-6
Your course is designed in accordance with the FHEQ to ensure your qualification is awarded on the basis of nationally established standards of achievement, for both outcomes and attainment. The qualification descriptors within the FHEQ set out the generic outcomes and attributes expected for the award of individual qualifications. The qualification descriptors contained in the FHEQ exemplify the outcomes and attributes expected of learning that results in the award of higher education qualifications. These outcomes represent the integration of various learning experiences resulting from designated and coherent courses of study.	
QAA Subject benchmark statement(s)	http://www.qaa.ac.uk/quality-code/subject-benchmark-statements
Subject benchmark statements provide a means for the academic community to describe the nature and characteristics of courses in a specific subject or subject area. They also represent general expectations about standards for the award of qualifications at a given level in terms of the attributes and capabilities that those possessing qualifications should have demonstrated.	

Section 10– Intermediate exit awards (where available)		
You may be eligible for an intermediate exit award if you complete part of the course as detailed in this document. Any additional criteria (e.g. mandatory modules, credit requirements) for intermediate awards is outlined in the sections below.		
Award	Criteria	Awarding body
Diploma in Higher Education (DipHE)	Pass in 210 credits of which at least 90 must be at or above FHEQ Level 4 and at least 120 of which must be at or above FHEQ Level 5	Royal Holloway and Bedford New College

Certificate in Higher Education (CertHE)	Pass in 120 credits of which at least 90 must be at or above FHEQ Level 4	Royal Holloway and Bedford New College
