# **Building a Sustainable Future**

### Blade

Most turbines have three long and slender blades that rotate in the wind.

#### Renewable

Energy resources which are replenished on a short timescale

> Tower A high tower places blades clear off the ground.

### Intermittent

Sources of power which fluctuate up and down and are not always available

> Wind generation

**Converting the** wind's kinetic energy into electrical power CO<sub>2</sub> neutral

atmosphere

**Sustainable** Meeting the needs of today without compromising future needs

**Green transportation** Travel which does not compromise the environment

## The carbon dioxide released into the atmosphere is offset (or balanced) by the amount that is removed from the

#### Nacelle Houses the generator, drive train and gearbox
