The Physics of Polar Bears

Dave Farmer, Department of Physics

Physics doesn’t stop at the edge of the textbook. It governs the world around us: everything we can see, hear, touch and smell and everything we can’t as well.

This fun Christmas Lecture will show how an appreciation of the underlying physical rules turns the world into a more interesting and beautiful place.

Also features polar bears.

The lecture is open to the general public but particularly suited to science GCSE and A-Level students.

Science for Schools. All welcome

Wednesday 10 December
6.15pm
Windsor Building
